

ALL-CUT 2 RING SAW BLADE

RING SAWING WITHOUT LIMITS

The All-Cut 2 Ring Saw Blade is all about versatility. It's designed to cut any construction material*...Fast. The blade incorporates our most advanced brazing technology, bonding high-quality diamonds to the steel core for consistently high performance. We've taken the no-holds-barred approach with the All-Cut 2 Ring Saw Blade, giving the operator freedom to cut virtually any material*, up to 20% faster than the previous generation. It is available in a 14" diameter and one drive wheel is included. Additional drive wheels are available.

Drive Wheel, 2nd Generation

*While the blade can be used to occasionally cut steel, it was not designed for heavy steel cutting applications. For demanding metal-working applications, please refer to DiamondX® products. While adaptors permit any blade to be used on various manufacturers' saws, certain manufactures recommend against using particular type of blades on their machines. As such, customers are requested to check suitability of all blades before purchase and use on any given saw and/or machinery.
