# ZENESIS

ZENESIS™ is an advanced technology that delivers dramatic improvement in diamond tool performance through the custom designed diamond patterns specific to each application.

### ZENESIS™ **Pattern Technology:**

#### FROM THE COMPANY THAT STARTED A REVOLUTION

Simple patterning is not enough. Patterning technology has been around since 1960's, however the performance gained through even distribution of diamond grit did not justify the added complexity in manufacturing. Through years of intensive research and development, our engineers at ZENESIS™ have refined our proprietary patterned diamond technology to achieve maximum cutting performance without sacrificing life or quality of the cut. Our pattern exposes the ideal number of the highest quality diamonds throughout the life of the tool, providing consistent performance from start to finish.

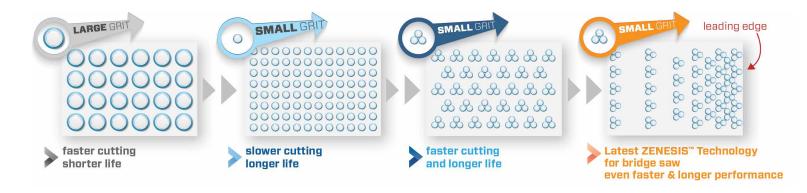

- Speed: Up to 70% faster cutting speed\*
- Life: Up to 70% longer tool life\*

# Hybrid Layering

#### Performance Runs Deep

By combining layering techniques with extraordinary degree of precision, we ensure that our high-quality diamonds will always be evenly exposed throughout the segment to allow faster cutting and efficient debris removal. And we've rigorously exacted our manufacturing processes to ensure a perfect pattern – cut after cut.

For our most innovative blade offering, ZENESIS<sup>™</sup> takes this process one step further by optimizing the distribution and concentration of diamonds on the segments to deliver raw cutting power where it is needed most – the leading edge. Greater performance is delivered as this strategic concentration of diamonds on the hardest working areas of the segment virtually removes all cutting inefficiencies.

## **Conventional Diamond Tools**

- Diamonds are randomly distributed.
- Random distribution results in inconsistent tool performance.
- Trade-off results between cutting speed and tool life.

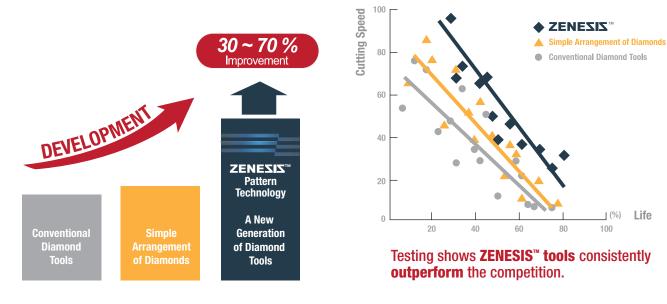

## **Simple Arrangement of Diamonds**

- Elimination of random distribution provides only marginal improvement in performance consistency.
- Does not justify the increase in manufacturing complexity

## ZENESIS<sup>™</sup> Technology:

**Evolution of a Revolution** 

- Delivers optimal patterns of diamonds for specific applications
- Hybrid layering provides maximum diamond exposure for enhanced performance
- Up to 70% faster cutting speed
- Up to 70% longer life
- Cost-effective mass production
- Proprietary, patented technologies

Bridge Saw Blades 20mm • 🌢 🖃

Quartzite is a unique natural rock made up of interlocking quartz crystals resulting in a remarkably dense and hard rock. To quickly and cleanly cut a material of this quality requires a specialized blade. The superior quartzite cutting performance of the ZENESIS™ Quartzite blade has been verified through independent testing.

Optimal feed rates will vary depending on the saw being used. We recommend starting at the lower rpm and feed rates provided above and gradually increase until the finish is no longer ideal and/or the amp draw exceeds the manufacturer's recommendation. For miter cuts recommended feed rates should be reduced by 20 - 30%.
